SIMRAN TAJ

Software Engineer | Python • C#/.NET Core • REST APIs • SQL • Azure • AI Agents

Bengaluru, India | +91 90352 77904 | ms.simrantaj@gmail.com | linkedin.com/in/simrantaj | github.com/Simrantajk

SUMMARY

Software engineer working inside a developer team on regulated healthcare software, with a record of reliable delivery: 2 releases with zero production defects. Write Python tooling and Playwright automation at work, and built a REST API in C#/ASP.NET Core with Entity Framework, LINQ, dependency injection and CI/CD in LTM training. Strong debugger who isolates problems across app, backend, firmware and hardware layers. Contributed to AI agent workflows; completed Agentic AI training; Azure Fundamentals (AZ-900).

EXPERIENCE

LTM (LTIMindtree) | IIoT Engineer, Sonova client (embedded with dev team) Sep 2025 – Present

- Contributed to 2 releases of hearing-aid companion apps (iOS/Android, Bluetooth) with zero production defects; supporting the 3rd release this cycle.
- Building Python + Playwright regression automation to cover gaps in manual flows and catch regressions earlier each sprint.
- Isolated a Remote Support bug where sessions failed to start because the Rendezvous ID (RID) differed between sessions despite a valid RID; traced it across the app, backend and the Palio firmware-installation tool and gave developers a precise repro.
- Debugged Bluetooth pairing and settings-sync issues across 9+ device pairs and multiple firmware/accessory configurations, isolating causes to the app, firmware or accessory layer using Logcat and device logs.
- Reported 29+ defects with logs and exact repro steps, cutting triage back-and-forth; verified fixes through regression every sprint.
- Executed 200+ system and regression test cases traced to JIRA stories and Polarion specs in Agile sprints, working directly with developers on release readiness.

LTM (LTIMindtree) | Airline Disruption Management AI Agents (IROPs) Enterprise project

- Contributed to building AI agents for disruption detection, passenger re-accommodation and operational recovery in an Agile enterprise team; supported deployment preparation for the agent workflows.

Elfinity | Web Development Intern 4 months

- Built responsive, cross-browser web pages from design requirements using HTML5 and CSS3; fixed layout bugs before delivery.

PROJECTS

Travel Tales | REST API (C#, ASP.NET Core, Entity Framework, LINQ) LTM training, team lead

- Led a team building a REST API app with full CRUD (5 endpoints, including update by ID) using dependency injection and OOP; code managed on GitHub with a CI/CD workflow. Scored 91% in individual evaluation.

PayTrack | Payroll CLI (Python) Personal project, built with AI-assisted development

- Built a command-line payroll app with login, employee management, attendance CSV import, PF/PT rules from a mock API, payroll calculation, payslips and CSV/JSON exports.

ATS Resume Analyzer | Python Personal project

- Built a resume/JD parser that normalizes skills and scores keyword matches; tested on 99+ resumes with 79%+ match consistency.

HealthLink | Healthcare Portal (Django, MySQL, Bootstrap) Academic project

- Built a role-based portal with access control and patient-record workflows.

TECHNICAL SKILLS

Languages: Python, C#, JavaScript, SQL, Java, HTML/CSS
Development: ASP.NET Core, Entity Framework, Django, React, REST APIs, OOP, dependency injection
Data & Cloud: MySQL, MS SQL, MongoDB, Azure, AWS
Testing & Automation: Python + Playwright, integration, system, regression and API testing, Logcat, log analysis
Tools: Git, GitHub CI/CD, JIRA, Polarion, Agile/Scrum

EDUCATION & CERTIFICATIONS

RNS Institute of Technology | B.E., Information Science and Engineering (CGPA 8.8) 2021 – 2025

Agentic AI, Hugging Face (May 2026) • Microsoft Azure Fundamentals AZ-900 (Mar 2026) • Foundations of Software Testing and Validation, University of Leeds (May 2026) • Introduction to Medical Software, Yale University (Jun 2026)
